Career Objective

Seeking an amateur role to increase and expand my developer knowledge achieved from Programming Hero Web Course and Reading Docs in the last year and got the skills of development sectors and completed some challenging projects there.

Skills

- **Front-end:** HTML5, CSS3, Bootstrap5, Tailwind CSS, JavaScript ES6, React, React Router, React Hook, Firebase.
- **Back-end:** Node.js, Express.js, MongoDB.

- **Knowing about:** JWT, MUI, Google Map, TypeScript, Next.js, Payment Gateway.
- **Software & Tools**: Git Bash, GitHub, Visual Studio Code, Subline Text, Netlify, Firebase, Heroku, Vercel.
- **Extra skills**: Figma, Adobe XD, Adobe Photoshop, Adobe Illustrator, MS Office.

Technical Projects

Carpenco Store (MERN Stack manufacturer website)

Live Preview | GitHub Client Side | GitHub Server Side

 Overview website:
- It is a full stack website that has Firebase and React Router. React has been used on this site to develop its UI. I uploaded all the data from MongoDB.
- It provides a logged-in with an Email & Passwords and a direct Google Sign-in method.
- It is developed for the people who want to buy carpenter tools. It shows a dashboard which has different functionality for normal Users and Admin. The user can see "**My Profile**"," **My Reviews**", "**My Orders**", "**Add A Review**". The admin can see, "**My Profile**", "**Manage User**", "**Manage All Product**", "**Add Product**", "**Manage Product**". The user cannot see the options of the admin and the admin can not see the options of the users.

• **Technology Used:**
HTML, CSS, React Bootstrap, React.js, React Router, Node.js, Express.js, MongoDB, Firebase Authentication, Fontawesome.

Motors Warehouse (MERN Stack warehouse website)

Live Preview | GitHub Client Side | GitHub Server Side

Overview website:
- A full stack website that has Firebase and React Router. I used React in this site to develop its UI and uploaded all the data from MongoDB.
- It implements a logged-in method which also has an Email & Passwords and a direct Google Sign-in method.
- That website is mainly built focusing on importers of branded cars. As a new importer, his products will be shown on "**My items**". All the Importers products will be shown on the "**Manage Inventory**". By delivering products, the items will be less and by adding products, the number of products will be counted automatically.

Technology Used:
HTML, CSS, React Bootstrap, React.js, Node.js, Express.js, MongoDB, Heroku, Firebase, Sweet Alert, React Toastify.

Eleanor Atwood (React Tutor Website) Live Preview | GitHub

Overview website:
- This is a Front-end website that has Firebase and React Router.
- It produces a logged-in method which has an Email & Passwords and a direct Google Sign-in method.
- It is mainly built focusing on mathematics tutor services and other courses. The user can preview the course details. He can buy any kind of course that are available on the site and confirming order from that site.

Technology Used:
HTML, CSS, React Bootstrap, React.js, React Router, Firebase, Sweet Alert, React Firebase Hooks, Netlify.
